

**ARGYLE DENTAL PROFESSIONALS, PA
VOLUMETRIC (3D) CT SCANNING RX**

Date _____

CT scanning of the head and neck allows your doctor the highest degree of radiographic accuracy for patients undergoing implant placement, third molar (wisdom tooth) extraction, endodontic therapy, orthodontic therapy, or head and neck diagnostics. Typical medical CT Scans can cost between \$400 and \$1300. The Icat cone beam scanner allows us to provide you and your doctor with cost effective imaging. Your first scan includes radiographic interpretation from a Shands Oral Radiologist. Subsequent scans are provided without an interpretation and are thus at an even lower fee. Insurance will not be accepted for the scans, however we do accept cash, debit or major credit cards at the time of service (No personal checks please). Please arrive 15 minutes prior to your appointment time. All jewelry and metal will have to be removed from the shoulders up. A map and directions are included. Please remember to bring this form with you, as it contains your doctor's orders. The ADA code for self-submission: (D0360-Cone Beam CT Scanning)
